EXECUTIVE SUMMARY

GEOTEK, INC. (GEOTEK) has performed a Phase I Environmental Site Assessment (ESA) for Assessor's Parcel Number (APN) 479-140-022 (the "Subject Property"), located in the City of Moreno Valley, Riverside County, California. GEOTEK'S services were conducted in substantial conformance with the scope and limitations of the American Society of Testing and Materials (ASTM) E 1527-21, "*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*", which is approved to meet the requirements of the federal All Appropriate Inquiries (AAI) standards as set forth in the Code of Federal Regulations, Title 40, Section 312 (40 CFR 312), and GEOTEK Proposal No. P-0504725-CR, dated May 9, 2025. Any additions or deletions from the scope of services are discussed in the appropriate sections of this assessment.

A representative of GEOTEK conducted a Subject Property reconnaissance on May 15, 2025. The weather was warm, and the sky was clear. The almost square-shaped Subject Property is currently comprised of one (1) parcel of land (Riverside County Assessor's Parcel Number (APN) 479-140-022). The parcel encompasses a total of approximately 9.39 acres. The Subject Property can generally be accessed from Watson Way to the west, Cottonwood Avenue to the south and Patricia Lane to the east.

The Subject Property is currently vacant land. Visual evidence of hazardous substances and waste was not observed during the Subject Property reconnaissance. No pungent or acrid odors were observed emanating from the Subject Property.

The Subject Property is in an area largely characterized by mixed-use development. The Subject Property is bound to the north by residential development. Residential development bounds the Subject Property to the west. Cottonwood Avenue, followed by a single-family residence, a storage yard and a county maintenance facility, bounds the Subject Property to the south. Patricia Lane and residential development bounds the Subject Property to the east. None of the adjoining properties appear to represent a recognized environmental condition or environmental concern to the Subject Property.

The Subject Property does not appear in the environmental database report obtained for this assessment.

There is one (1) adjoining facility listed in the environmental database report obtained for this assessment. Due to the facility status; lack of current violations, spills or leaks; investigations or clean-ups; and/or location hydrogeologically down-gradient, it is GEOTEK'S opinion that this facility has not created a recognized environmental condition to the Subject Property.

There are twelve (12) facilities listed in the database report within the various search distances specified by ASTM E 1527-21. Due to the distance; facility status; lack of current violations, spills or leaks; investigations or clean-ups; and/or locations hydrogeologically down- or cross-gradient, it is GEOTEK'S opinion that these facilities have not created a recognized environmental condition to the Subject Property.

Based on readily available historical information, the Subject Property appears to have been vacant land since at least 1938.

The surrounding areas appear to have been vacant land, possibly utilized for agricultural purposes and/or occupied by scattered residential structures from at least 1938 until at least 1953. The residential development to the north and west of the Subject Property can first be observed in an aerial photograph dated 1959. Structures can be observed to the south of the Subject Property in an aerial photograph dated 1978. The residential development to the east of the Subject Property can be observed in an aerial photograph dated 2006. The surrounding properties first appear similar to the current conditions in an aerial photograph dated 2009.

Based on the investigation, this Phase I Environmental Site Assessment has not revealed evidence of a recognized environmental condition (REC), controlled recognized environmental condition (CREC), historical recognized environmental concern (HREC) or significant data gaps on or near the Subject Property.

This executive summary does not contain all the information that is found in the full report. The report should be read in its entirety to obtain a more complete understanding of the information provided and to aid in any decisions made or actions taken based on this information.

1.0 INTRODUCTION

GEOTEK, INC. (GEOTEK) has performed a Phase I Environmental Site Assessment (ESA) for APN 479-140-022 (the "Subject Property"), located in the City of Moreno Valley, Riverside County, California.

1.1 PURPOSE

The purpose of this Phase I ESA was to identify and evaluate actual and potential recognized environmental conditions (RECs) at the Subject Property. It was not the purpose of this assessment to determine the degree or extent of contamination, if any, but rather the potential for contamination. A REC is defined in ASTM E1527-21 as:

> *"The presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property; or (3) the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

ASTM E1527-21 defines a de minimis condition as:

> *"A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition."*

1.2 SCOPE OF WORK

The Phase I ESA is a general characterization of environmental concerns based on reasonably ascertainable information and observations. GEOTEK performed the Phase I ESA in substantial accordance with ASTM Standard E 1527-21. The following services were provided for the assessment:

- A reconnaissance of the Subject Property and surrounding properties to visually assess current utilization and indications of potential surface contamination. This was accomplished by driving the Subject Property boundaries and then traversing the Subject Property until the entire Subject Property had been surveyed.

- A reconnaissance of the surrounding area for approximately one-half mile was conducted, without entering the properties, making observations concerning property uses, conditions, and housekeeping.

- Interviews were conducted, either in person, via telephone, or via a written questionnaire(s) with the client representative, the seller's representative and/or appropriate regulatory agency personnel.

- A review of the geologic and hydro-geologic settings was conducted using reasonably ascertainable public records and documents.

- An environmental database report was obtained from a data service provider. This database report compiles and locates documented "hazardous waste" facilities within specific minimum search distances as defined by ASTM E 1527-21. If necessary, additional information on identified facilities was gathered by a file review at the appropriate federal, state, local, and/or tribal regulatory agency.

- A review of reasonably ascertainable historical records (including aerial photographs, topographic maps, building records, and city directories) was conducted to assess the historical land utilization and indications of potential contamination or sources of contamination for the Subject Property.

- This report was prepared, which relates the findings of this study and presents the conclusions and recommendations.

Specific items not included in this Scope of Services are soil and water analysis, asbestos containing materials analysis, radon analysis, lead-based paint analysis, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, vapor intrusion testing, high voltage power lines, PFAS analysis, and other items not within the scope of ASTM E 1527-21.

1.3 SIGNIFICANT ASSUMPTIONS

Specific assumptions by GEOTEK for this assessment include:

- GEOTEK had permission to access the Subject Property grounds.

- The client has provided GEOTEK with available geotechnical or environmental reports for the Subject Property.

- The client has provided GEOTEK with known current or historic uses of hazardous materials at the Subject Property, or with other specialized knowledge of the environmental history of the Subject Property and surrounding area.

- The client is not the sole and absolute source of information.

- The seller has provided proper and complete access to their knowledge, both written and verbal, and GEOTEK can rely on the information.

1.4 LIMITATIONS AND EXCEPTIONS

GEOTEK conducted a Phase I Environmental Site Assessment in substantial accordance with ASTM E 1527-21 and authorized by WJK DEVELOPMENT CO. This study does not include sampling of groundwater and/or materials on-site for environmental testing. This report is intended for the use of WJK DEVELOPMENT CO. The contents should not be relied upon by any party other than the aforementioned without the express written consent of GEOTEK.

The findings, conclusions, and recommendations made in this report are based on the information that was made available to GEOTEK, in most instances from public records. The information is relevant to the date of the sitework and should not be relied on to represent conditions at any later date. The opinions and conclusions expressed herein are based on information obtained during the assessment and on experience and current standards of technical practice. GEOTEK makes no other warranties, either express or implied, concerning the completeness of the data furnished to us. GEOTEK cannot be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the assessment was undertaken. GEOTEK is not responsible, nor liable for work, testing or recommendations performed or provided by others. This Phase I Environmental Site Assessment is not and should not be construed as a warranty or guarantee about the presence or absence of environmental hazards or contaminants which may affect the Subject Property. Facts, conditions, and acceptable risk factors change with time; accordingly, this report should be viewed within this context.

Specific limitations to the scope of ASTM E 1527-21 due to contract limitations, availability of resources, and/or encountered Subject Property conditions are discussed in the appropriate sections of this report.

1.5 Special Terms and Conditions

This assessment report is presented as fulfilling the standard requirements of most financial institutions, governmental regulatory agencies, ASTM, and generally accepted industry standards and practices. Please refer to GeoTek Proposal No. P-0504725-CR for complete terms and conditions for this assessment.

1.6 Reliance

This assessment has been prepared for its exclusive use, and may be relied upon by WJK DEVELOPMENT CO, their successors and assignees. Third party reliance letters may be issued upon request and upon the payment of the, then current, fee for such letters. All third parties, relying on this report, by such reliance, agree to be bound by the General Conditions and Limitations agreed by WJK DEVELOPMENT CO. No reliance by any party is permitted without such an agreement, regardless of the content of the reliance letter itself.

2.0 DESCRIPTION OF SUBJECT PROPERTY AND SURROUNDING AREA

The objective of describing the Subject Property and surrounding area is to document current conditions as observed and to obtain information which would indicate the likelihood of a recognized environmental condition in connection with the Subject Property. A representative of GEOTEK conducted a Subject Property reconnaissance on May 15, 2025. The weather was warm, and the sky was clear. The Subject Property can generally be accessed from Watson Way to the west, Cottonwood Avenue to the south and Patricia Lane to the east.

4.4 OTHER USER PROVIDED INFORMATION

GEOTEK was not provided with other information from an environmental perspective by WJK DEVELOPMENT CO. for the Subject Property.

5.0 PROPERTY PHYSICAL SETTING

Surface and subsurface environments are of interest because they control the movement of water-born contaminants, which could be transported to and from the Subject Property. GEOTEK reviewed information regarding the physical setting of the Subject Property and immediate surrounding area.

5.1 REGIONAL GEOLOGY

The property is situated in the Peninsular Ranges geomorphic province. The Peninsular Ranges province is one of the largest geomorphic units in western North America. Basically, it extends from the point of contact with the Transverse Ranges geomorphic province, southerly to the tip of Baja California. This province varies in width from about 30 to 100 miles. It is bounded on the west by the Pacific Ocean, on the south by the Gulf of California and on the east by the Colorado Desert Province.

The Peninsular Ranges are essentially a series of northwest-southeast oriented fault blocks. Several major fault zones are found in this province. The Elsinore Fault zone and the San Jacinto Fault zone trend northwest-southeast and are found near the middle of the province. The San Andreas Fault zone borders the northeasterly margin of the province.

5.2 LOCAL GEOLOGIC SETTING

The Subject Property is understood to be underlain by alluvium (Dibblee, T.W. and Minch, J.A., 2003). Additional data regarding soil survey information for the Subject Property is also included in Appendix B.

5.3 TOPOGRAPHY

The Subject Property can be considered as having relatively flat terrain. Based on review of the topographic maps for the area and other documents reviewed for this report, the elevation of the Subject Property is approximately 1,588 feet above mean sea level.

5.4 VICINITY SURFACE DRAINAGE

Natural drainage at the Subject Property is interpreted to be dominantly directed toward the south-southwest, conforming to the natural topography in the area.

According to the Federal Emergency Management Agency (FEMA), the Subject Property is located in an "Area of Minimal Flood Hazard" (Community Panel Number 06065C-0761G, dated August 28, 2008). A copy of the FEMA map is included in Appendix C.

5.5 HYDROGEOLOGY

Based on review of the California's Groundwater Live: Groundwater Levels website (California's Groundwater Live: Groundwater Levels), the depth to groundwater is greater than 50 feet below existing grades.

6.0 ENVIRONMENTAL REGULATORY RECORDS REVIEW

The records review is conducted to help identify known recognized environmental conditions at the Subject Property and/or on adjoining or nearby properties which may have impacted the Subject Property.

6.1 ENVIRONMENTAL DATABASE RECORDS SEARCH

GEOTEK obtained and reviewed an environmental database report of the federal and state environmental records specified by ASTM E 1527-21. The database report was provided by Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. Additionally, orphan or un-mappable sites listed by EDR were reviewed for the approximate minimum search distances noted and included in the discussion, if applicable. Refer to Appendix E for a copy of the database report.

6.2 Discussion of Regulatory Records

6.2.1 Department of Defense

The Department of Defense (DOD) facility database includes federal facilities operated by the DOD which encompasses greater than 640 acres. Formerly Used Defense Sites (FUDS) are properties where the U.S. Army Corps of Engineers is actively working or will take necessary cleanup actions. Environmental impacts from the operations of such facilities have been documented across the continental United States. The DOD and FUDS databases are searched for a 1.0-mile distance.

The Subject Property does not appear on the DOD or FUDS databases. There are no facilities listed on the DOD of FUDS databases within 1.0-mile of the Subject Property.

6.2.2 National Priorities List

The National Priorities List (NPL) is the EPA's list of confirmed or proposed Superfund facilities. GeoTek's review of this data includes facilities which have been delisted from the NPL. The NPL is searched for a 1.0-mile distance.

The Subject Property does not appear on the NPL. There are no NPL facilities located within 1.0-mile of the Subject Property.

6.2.3 Superfund Enterprise Management System

The Superfund Enterprise Management System (SEMS, formerly CERCLIS) is a compilation of facilities that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances. GeoTek's review of SEMS facilities includes archive (no further remedial action planned) facilities. The SEMS list is searched for a 0.5-mile distance.

The Subject Property does not appear on the SEMS list. There are no SEMS facilities located within 0.5-mile of the Subject Property.

The Subject Property does not appear on the SEMS-ARCHIVE list. There are no facilities on the SEMS-ARCHIVE list within 0.5-mile of the Subject Property.

6.2.4 Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA) compiles selective information on facilities which generate, transport, store, treat and/or dispose of hazardous waste. RCRA facilities can be listed on one of three databases:

- *Corrective Action Facilities (CORRACTS)* are facilities undergoing corrective action. A corrective action order is issued pursuant to RCRA Section 3008(h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. The CORRACTS list is searched for a 1.0-mile distance.

  The Subject Property does not appear on the CORRACTS list. There are no CORRACTS facilities located within 1.0-mile of the Subject Property.

- *Transportation, Storage, and Disposal Facilities (TSD)* includes facilities that transport, store or dispose of hazardous waste and are not listed on the RCRA Generators list. The TSD is searched for a 0.5-mile distance.

  The Subject Property does not appear on the RCRA TSD list. There are no RCRA TSD facilities located within 0.5-mile of the Subject Property.

- *Generators List* identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. The RCRA generators list is searched for the Subject Property and adjoining properties.

  The Subject Property does not appear on the RCRA Generators list. There is one (1) facility listed on the RCRA Generators list; however the facility does not adjoin the Subject Property.

6.2.5 Federal Institutional Control/Engineering Control Registries

The EPA maintains three (3) databases which list sites that have institutional and/or engineering controls in place as part of their operations. These databases are searched for the Subject Property.

The Subject Property does not appear on these databases.

6.2.6 EMERGENCY RESPONSE NOTIFICATION SYSTEM

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil or hazardous substances. The ERNS list is searched for the Subject Property.

The Subject Property does not appear on the ERNS list.

6.2.7 STATE RESPONSE SITES

The State Response Sites (RESPONSE) records are the state equivalent to the federal National Priorities List (NPL) database. The RESPONSE database is searched for a 1.0-mile distance.

The Subject Property does not appear on the RESPONSE database. There are no RESPONSE facilities located within 1.0-mile of the Subject Property.

6.2.8 ENVIROSTOR DATABASE

The EnviroStor Database (EnviroStor, formerly CALSITES) records are the state equivalent to the federal SEMS database. EnviroStor is searched for a 0.5-mile distance.

The Subject Property does not appear on the EnviroStor database.

There are two (2) EnviroStor facilities located within 0.5-mile of the Subject Property. The first facility is listed as Moreno Valley Regional Learning Center, located at the northeast corner of Perris Boulevard and Bay Avenue. The facility is located 1,281 feet (0.243 mile) south-southwest of the Subject Property. The site type is listed as "school investigation" and the status is listed as "no further action".

The second facility is listed as Bay Avenue Elementary School, located at 24801 Bay Avenue. The facility is located 2,182 feet (0.413 mile) southwest of the Subject Property. The site type is listed as "school investigation" and the status is listed as "no further action".

Due to the distance; facility status; lack of current violations, spills or leaks; investigations or clean-ups; and/or locations hydrogeologically down-gradient, it is GEOTEK'S opinion that these facilities have not created a recognized environmental condition to the Subject Property.

6.2.9 California Hazardous Material Incident Report System

The California Hazardous Material Incident Report Systems (CHMIRS) is a state database used to collect information on reported hazardous materials incidents (accidental leaks and spills). The CHMIRS list is searched for a 0.25-mile distance.

The Subject Property does not appear on the CHMIRS database. There are no CHMIRS facilities within 0.25-mile of the Subject Property.

6.2.10 Cleanup Program Sites

The California Cleanup Program Sites (CPS) database (formerly the SLIC database) is compiled by the CEPA State Water Resources Control Board through its Regional Water Quality Control Boards (RWQCB). It is designed to protect and restore water quality from spills, leaks, and similar discharges. The CPS is searched for a 0.5-mile distance.

The Subject Property does not appear on the CPS database. There are no CPS facilities located within 0.5-mile of the Subject Property.

6.2.11 Solid Waste Facilities List

The Department of Resources, Recycling, and Recovery (DRRR) and CEPA maintain multiple databases identifying and tracking landfill facilities. The Solid Waste Fill/Landfill (SWF/LF), Waste Management Unit Database System (WMUDS)/Solid Waste Assessment Test (SWAT), and Solid Waste Recycling Facilities (SWRCY) databases includes information pertaining to closed and open solid waste facilities operating in the state of California (collectively the "SWLF"). The SWLF databases are searched for a 0.5-mile distance.

The Subject Property does not appear on the WMUDS/SWAT, SWF/LF or SWRCY lists. There are no facilities on the WMUDS/SWAT, SWF/LF or SWRCY lists within 0.5-mile of the Subject Property.

6.2.12 Leaking Underground Storage Tanks List

The California Leaking Underground Storage Tanks (LUST) list is a compilation of petroleum storage tank sites that have reported a release. GeoTek's review includes historic, archived and tribal LUST databases. The LUST list is searched for a 0.5-mile distance.

The Subject Property does not appear on the LUST list.

There are six (6) facilities identified on the LUST databases within 0.5-mile of the Subject Property. The table below provides the facility name, address, location in relation to the Subject Property and facility status.

Facility Name	Address	Location in Relation to Subject Property	Facility Status
Circle K #0872	13261 Perris Boulevard	941 feet (0.178 mile) NW (Cross-Gradient)	Leak Being Confirmed
Circle K #0872	13261 Perris Boulevard	941 feet (0.178 mile) NW (Cross-Gradient)	Completed-Case Closed
Sunnymead District Maintenance Yard	25241 Cottonwood Avenue	86 feet (0.016 mile) SE (Down-Gradient)	Completed-Case Closed
Sunnymead District Maintenance Yard	25241 Cottonwood Avenue	86 feet (0.016 mile) SE (Down-Gradient)	Case Closed
Tosco/76 Station #6962	25020	2,585 feet (0.490 mile) SSW (Down-Gradient)	Preliminary Site Assessment Underway
Tosco/76 Station #6962	25020 Allessandro Boulevard	2,585 feet (0.490 mile) SSW (Down-Gradient)	Completed-Case Closed

The six (6) facilities listed appear to be duplicate listings and based on review there are three (3) facilities identified on the LUST databases. Due to the facility status, distances and/or being located hydrogeologically cross- or down-gradient from the Subject Property, it is GEOTEK'S opinion that these facilities have not created a recognized environmental condition to the Subject Property.

6.2.13 UNDERGROUND STORAGE TANKS LIST

The California Underground Storage Tank (UST) list is a compilation of petroleum storage tank sites that are registered with the state of California. GEOTEK'S review included historic, archived and tribal UST databases. The UST list is searched for the Subject Property and adjoining properties.

The Subject Property does not appear on the UST or HIST UST lists.

There is one (1) adjoining facility on the UST list. The facility is listed as County of Riverside Waste Resources Management District, located at 25241 Cottonwood Avenue. Due to the facility status; lack of current violations, spills or leaks; investigations or clean-ups; and/or location

hydrogeologically down-gradient, it is GEOTEK'S opinion that this facility has not created a recognized environmental condition to the Subject Property.

There is one (1) adjoining facility on the HIST UST list. The facility is listed as Sunnymead Road Yard, located at 25241 Cottonwood Avenue. Due to the facility status; lack of current violations, spills or leaks; investigations or clean-ups; and/or location hydrogeologically down-gradient, it is GEOTEK'S opinion that this facility has not created a recognized environmental condition to the Subject Property.

6.2.14 STATE INSTITUTIONAL CONTROL/ENGINEERING CONTROL REGISTRIES

The State of California maintains institutional and engineering control databases or registries. This lists sites with engineering or institutional controls in place. Institutional controls include administrative measures intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods. The State Institutional Control/Engineering Control Registries is searched for the Subject Property.

The Subject Property does not appear on the State Institutional Control/Engineering Control Registries.

6.2.15 FEDERAL AND/OR STATE VOLUNTARY CLEANUP PROGRAM

Voluntary Cleanup Program (VCP) facilities are those where the current or past owner of which has entered into an agreement with EPA or the state to utilize their own resources to remediate a site or facility. The VCP databases are searched for 0.5-mile.

The Subject Property does not appear on the VCP databases. No facilities were identified on the VCP databases withing 0.5-mile of the Subject Property.

6.2.16 BROWNFIELDS SITES

Brownfields sites (BFS) are real property, the expansion, redevelopment or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant or contaminant. Federal brownfields are listed by EPA. State brownfields in California are listed by CEPA. BFSs are searched for 0.5-mile.

The Subject Property does not appear on the federal or stated BFS database. There are no BFS facilities within 0.5-mile of the Subject Property.

6.2.17 Local and/or Tribal Databases

Tribal governments are under the jurisdiction of the EPA for environmental concerns. Currently, the EPA Region 9 publishes LUST and UST information for tribes in Arizona, California, Hawaii, Nevada, and the Pacific Territories. The LUST database is searched for 0.5 mile, and the UST database is searched for 0.25 mile.

The Subject Property does not appear on the Tribal LUST or UST databases. No facilities were identified on the Tribal LUST or UST databases within 0.5 mile of the Subject Property.

6.2.18 Drycleaners

The DRYCLEANERS list is compiled and provided by CEPA. The DRYCLEANER database is searched for a 0.25-mile distance.

The Subject Property does not appear on the DRYCLEANER list.

There is one (1) DRYCLEANER facility listed within 0.25-mile of the Subject Property. The facility is listed as Dryclean West Inc., located at 13373 Perris Boulevard, Suite E406. The facility is located 700 feet (0.133 mile) west-northwest of the Subject Property. The status is listed as "out of business". Due to the facility status and distance, it is GeoTek's opinion that this facility has not created a recognized environmental condition to the Subject Property.

6.2.19 Other Databases

EDR compiles information from multiple federal, state, local, and proprietary databases. Most are secondary or tertiary or redundant. Facilities compiled on these other databases are evaluated based on the severity of the listing, distance and location.

The Subject Property does not appear in the environmental database report obtained for this assessment.

There are no additional facilities listed on the database report within the various search distances specified by ASTM E 1527-21.

6.2.19.1 Historic Automotive Facilities

EDR provides a proprietary database including the names, locations, and dates of known historic automotive repair and service facilities. This database is searched for 0.25-mile.

The Subject Property does not appear on the historic automotive facilities database. There are no facilities within 0.25-mile of the Subject Property on the historical automative facility database.

6.2.19.2 Historical Drycleaners

EDR provides a proprietary database including the names, locations, and dates active of known dry-cleaning facilities. The state and certain local regulatory agencies also provide information on dry-cleaning facilities. These databases are searched for 0.25-mile.

The Subject Property does not appear on the Historical Drycleaners database. There are no facilities listed within 0.25-mile of the Subject Property on the Historical Drycleaners database.

6.2.19.3 Manufactured Gas Plants

EDR provides a proprietary database including the names, locations, and dates active of known manufactured gas plants (MGP). This database is searched for 1.0-mile.

The Subject Property does not appear on the MGP database. There are no listed facilities within 0.25-mile of the Subject Property.

6.2.20 Unmappable Facilities

GeoTek reviewed the listing of "orphan" or unmappable facilities in the database report. There is one (1) unmapped facility in the database report. Due to the facility status, distance and/or location being hydro-geologically down- or cross-gradient, it is GeoTek's opinion that this facility has not created a recognized environmental condition to the Subject Property.

6.3 Local Regulatory Agency Records

GeoTek reviewed the CEPA (State Water Resources Control Board) "GeoTracker" database (GeoTracker (ca.gov)) and the CEPA (Department of Toxic Substances Control) "EnviroStor" database (EnviroStor (ca.gov)) for information on the Subject Property.

The Subject Property does not appear on the "GeoTracker" or "EnviroStor" databases.

GEOTEK consulted with the City of Moreno Valley Fire and Police Departments regarding on-site underground or above ground storage tanks, hazardous material permits, emergency responses, spills, inspections, controlled substances or other information of an environmental or hazardous nature in association with the Subject Property or adjoining facilities. Neither agency had information regarding the Subject Property.

6.4 PER- AND POLYFLUOROALKYL SUBSTANCES (PFAS)

Per- and Poly-Fluoroalkyl substances (PFAS) are a group of over 9,000 synthetic chemicals that have been used for over 70 years. Due to the very stable carbon-fluorine bonds, perfluoroalkyls are resistant to biodegradation, photooxidation, direct photolysis, and hydrolysis. Atmospheric deposition can lead to contamination of soils and leaching into groundwater away from point sources. Health effects in humans may include cancer, cardiovascular, immunological, endocrine, reproductive, and hepatic harm.

At the time of the adoption of ASTM 1527-21 standard, PFAS chemicals were considered to be "emerging contaminants" and therefore technically are considered to be non-scope considerations, per the ASTM-1527-21 standards. However, as of April 19, 2024, the United States Environmental Protection Agency (USEPA) officially designated the regulatory status of two (2) commonly utilized PFAS chemicals as hazardous substances under CERCLA with the final ruling going into effect on July 8, 2024. The two (2) chemicals are perfluoro octane sulfonic acid (PFOS) and perfluorooctanoic acid (PFOA). Furthermore, it is likely that numerous additional chemicals within the PFAS family will become officially designated as hazardous substances in the near future.

As PFOA and PFOS are now classified as hazardous substances, GEOTEK has reviewed available information from Federal and State databases, with regards to PFAS, for the Subject Property and surrounding properties to determine if there are any potential recognized environmental conditions. Generally, high-risk PFAS sites include airports, landfills, wastewater-treatment plants, government and military sites, petroleum plants, fire suppression/firefighting sites with aqueous film forming foam (AFFF), PFAS treated material and food packaging facilities, plating facilities, some biosolid farming sites, and most chemical production and manufacturing facilities, among others. These substances are searched by EDR under PFAS NPL, PFAS FEDERAL SITES, PFAS TSCA, PFAS RCRA MANIFEST, PFAS ATSDR, PFAS WQP, PFAS NPDES, PFAS ECHO, PFAS ECHO FIRE TRAINING, and PFAS Part 139 Airport within 0.25 search radius.

The Subject Property does not appear on the PFAS database within the EDR Radius Report. The Subject Property does not appear on the GeoTracker PFAS Map website (GeoTracker PFAS Map

(ca.gov)). The Subject Property does not appear on the USEPA PFAS Analytic Tools website (PFAS Analytic Tools (epa.gov)).

Based on the lack of high-risk facilities and no obvious signs of substantial PFAS contamination at the Subject Property, it is GEOTEK'S opinion that PFAS chemicals do not represent a recognized environmental condition to the Subject Property.

7.0 VAPOR ENCROACHMENT SCREENING

The purpose of a Vapor Encroachment Screen (VES) is to identify, to the extent feasible, if a Vapor Encroachment Condition (VEC) exists at the Subject Property.

A Vapor Encroachment Screen Report was generated for the Subject Property utilizing EDR's Vapor Encroachment Worksheet (see Appendix F).

It was determined that there are no former manufactured gas plants, former industrial sites, historical automotive facilities or historical drycleaners located within 600 feet and/or up-gradient from the Subject Property.

It was also determined that no other conditions that would indicate a VEC exist at the Subject Property.

It is GEOTEK'S opinion that a VEC is not likely to exist at the Subject Property. The Vapor Encroachment Screen report is included in Appendix F.

8.0 SUBJECT PROPERTY AND SURROUNDING AREA HISTORY

In order to construct the history of the Subject Property and the surrounding area, GEOTEK reviewed reasonably ascertainable public documents, including aerial photographs, topographic maps, building records, city directories, fire insurance maps, environmental liens and activity use limitations (AULs) and county assessor history records.

8.2.2 CITY DIRECTORIES

GEOTEK has reviewed a City Directory Image report obtained from and provided by EDR for the Subject Property and surrounding property addresses. The City Directory Image report provides information on a few surrounding property addresses. Any environmentally concerning surrounding properties have been previously discussed within the text of this report. These facilities do not appear to have created a recognized environmental condition at the Subject Property.

8.2.3 SANBORN MAP REVIEW

8.3 HISTORICAL USE SUMMARY

Based on readily available historical information, the Subject Property appears to have been vacant land since at least 1938.

The surrounding areas appear to have been vacant land, possibly utilized for agricultural purposes and/or occupied by scattered residential structures from at least 1938 until at least 1953. The residential development to the north and west of the Subject Property can first be observed in an aerial photograph dated 1959. Structures can be observed to the south of the Subject Property in an aerial photograph dated 1978. The residential development to the east of the Subject Property can be observed in an aerial photograph dated 2006. The surrounding properties first appear similar to current conditions in an aerial photograph dated 2009.

Data gaps exist from 1901 to 1938, 1943 to 1949, 1953 to 1959, 1959 to 1967, 1967 to 1973 and 1989 to 1997 due to the limited records which are reasonably ascertainable in the local area. However, it is GEOTEK'S opinion that additional historical information, if it were to become available, is not likely to change the conclusions or recommendations of this assessment.

9.0 SIGNIFICANT DATA GAPS

No significant data gaps were discovered while performing this Phase I Environmental Site Assessment. Therefore, it is GEOTEK'S opinion that sufficient information was obtained to identify current Subject Property conditions and past Subject Property usage.

Minor data gaps include:

- Gaps in the historic records from 1901 to 1938, 1943 to 1949, 1953 to 1959, 1959 to 1967, 1967 to 1973 and 1989 to 1997 due to the limited resources readily available and reasonably ascertainable in the local area or through online resources.

- GEOTEK has not received or reviewed Chain-of-Title documents for the Subject Property.

It is GEOTEK'S opinion that additional information, if it were to become available, is not likely to change the conclusions or recommendations of this assessment.

10.0 CONCLUSIONS AND RECOMMENDATIONS

GEOTEK has performed a Phase I Environmental Site Assessment (ESA) for the Subject Property in substantial conformance with the scope and limitations of ASTM E 1527-21 and GEOTEK Proposal No. P-0504725-CR dated May 9, 2025. Any exceptions to, or deletions from, this practice are described in the appropriate sections of this report.

Based on the investigation, this Phase I Environmental Site Assessment has not revealed evidence of a recognized environmental condition (REC), controlled recognized environmental condition (CREC), historical recognized environmental concern (HREC) or significant data gaps on or near the Subject Property.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations (AULs), such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel number and/or legal description
- search for ownership information
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.
- search for publicly available environmental encumbering instrument(s) filed on or after the recording of the current deed; between the recording of the current deed and the most current publicly available date
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2025 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/21/2025 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently

CIRCLE K STORE 2700872 (Continued) **1000174033**

implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** On September 16, 1998, two 10,000-gallon single-walled gasoline USTs and associated product piping and fuel dispensers were removed and replaced at the site. Significant concentrations of TPHg (up to 2,800 ppm), benzene (up to 16 ppm) and MTBE (up to 63 ppm) were reported in the soil samples collected beneath the southeastern portion of the UST cavity. TPHg, BTEX, and MTBE were not reported in the soil samples collected beneath the former fuel dispensers. Approximately 1,238 tons of soil was excavated and transported off-site. In June 2004, five soil borings (B1 through B5) were completed at the site as part of due diligence assessment activities. With the exception of concentrations of TPHg (0.2 ppm) and MTBE (0.11 ppm) reported in the soil sample analyzed from boring B2, TPHg, BTEX and fuel oxygenates were not detected. The site was placed into LOP. In April 2005, one vertical exploratory soil boring (SB-1) and three angle exploratory soil borings (AB-1 through AB-3) were advanced. Boring SB-1 was drilled vertically to approximately 60 bgs near the northeast corner of the UST cavity. Boring AB-1 was drilled beneath the USTs at an approximate angle of 18 degrees to 62 feet bgs (65 feet bgs along axis of the auger). Boring AB-2 was drilled at 21 degrees to 57.7 feet bgs (61 feet bgs along axis of auger). Angle boring AB-3 was drilled at an approximate angle of 20 degrees to59.5 feet bgs (62 feet bgs along axis of the auger). Groundwater was encountered during drilling at depths ranging from approximately 55 to 60 feet bgs. Petroleum hydrocarbons were reported in soil and groundwater samples. TPHg concentrations were reported in soil samples ranging from 0.4 ppm (AB3@33) to 41 ppm (AB1@60). BTEX were not detected in any soil samples collected from borings SB-1, AB-1 and AB-2, and between the 5 and 40 feet bgs in the soil samples collected from boring AB-3. MTBE was detected at concentrations ranging between 0.013 ppm (AB1@35) and 40 ppm (AB1@60). TPHg was reported at concentrations of 170,000 ppb and 18 ppb in groundwater hydropunch samples HP1@63 and SB1-HP1-60, respectively. Dissolved BTEX were not reported in the groundwater samples from borings AB-1 and SB-1. Dissolved MTBE was reported at concentrations of 32,000 ppb and 8,100 ppb in groundwater at HP1@63 and SB1-HP1-60, respectively. Between May 30 and June 1, 2006, groundwater monitoring wells MW-1 through MW-4 were installed. TPHg was detected in soil from each of the soil borings at depths ranging from 26 to 61 feet bgs with a maximum concentration of 120 ppm. MTBE

CIRCLE K #0872 (Continued) **S108201615**

was detected in soil from each of the soil borings at depths ranging from 46 to 61 feet bgs with a maximum concentration of 1.6 ppm. TBA was detected in soil from borings MW-2 and MW-4 with a maximum concentration of 0.90 ppm. Several volatile organic compounds (VOCs) were reported in borings MW-2, MW-3, and MW-4. MTBE in groundwater was reported in each well at concentrations ranging from 110 ppb to 2,000 ppb. TBA was reported in wells MW-2, MW-3, and MW-4 at concentrations of 7,700 ppb, 1,300 ppb, and 2,100 ppb respectively. TPHg, BTEX, the other fuel oxygenates and full-scan VOCs were not detected. On April 30 and May 8, 2007, two groundwater monitoring wells (MW-5 and MW-6) were completed to a depth of 60 feet bgs and three soil vapor extraction (SVE) wells (SVE-1 through SVE-3) were completed to depths of 45 feet, 30 feet, and 45 feet bgs, respectively. Groundwater was encountered at approximately Soil samples and groundwater samples were non-detect. Three SVE wells (SVE-1 through SVE-3) were installed in May, 2007. From May 14 to 19, 2007, a five day SVE pilot test was conducted. At the end of the 5-day event, influent TPHg concentrations were reported as 240 and 120 ppmv for wells SVE-1 and SVE-3, benzene concentrations were 4.1 and 2.0 ppmv for wells SVE-1 and SVE-3, and influent MTBE concentrations in SVE-1 decreased to 23 ppmv, while increasing in SVE-3 to 11 ppmv. 44 pounds of hydrocarbons was extracted. SVE was effective at removing hydrocarbons and would be a feasible remedial technology. In November 2007, wells MW-7 and MW-8 were installed to complete down-gradient assessment. No TPHg, BTEX or oxygenates were detected in the soil. In June 2008, ten ozone sparge (OS) wells (OS-1 though OS-10) were installed. Up to 0.91 ppm TPHg, 1.3 ppm MTBE and 0.064 ppm TBA was detected in the soil. A 30-day SVE event was started March 16, 2012 using vapor wells SVE-1, SVE-2, and SVE-3 at the request of RCDEH based on the increasing vapor concentrations at the end of the 5-day SVE pilot test. Wells SVE-2 and SVE-3 were taken off line March 30 due to low influent hydrocarbon concentrations with only SVE-1 remaining until the system was shut down April 15, 2012. Vapor samples were taken at 2 hours, 8 hours, 24 hours, and weekly thereafter. TPHg started at 190 ppmV, peaked at 430 ppmV and ended at 200 ppmV. Benzene started at 1.3 ppmV, peaked at 6.6 ppmV and ended at 2.2 ppmV. MTBE started at <0.5 ppmV, peaked at 48 ppmV and ended at 15 ppmV. 254 pounds of TPHg, 3.4 pounds of benzene, and 25 pounds of MTBE were removed at a rate of approximately 8.5 pounds per day The groundwater has been monitored since the third quarter 2006. Up to 1400 ppb TPHg, 3.2 ppb benzene, 0.73 ppb xylenes, 2.5 ppb ethylbenzene, 2900 ppb MTBE and 7700 ppb TBA has been detected in the groundwater and have decreased to non-detectable concentrations of TPHg, BTEX, and TBA since January 2010. MTBE is only detected in MW-2 and was 7 ppb during the first quarter 2012. Petroleum hydrocarbon concentrations in the groundwater have declined since 2006. Based on the rate of natural attenuation occurring at the site, ATC Associates, Inc. determined that active remediation no longer appears warranted. Contaminant decay rate calculations for the groundwater were performed for MTBE concentration reported in MW-2. Based on the decay rate calculations, well MW-2 will reach the clean-up goal of 5 g/L MTBE by the third quarter 2012. 60 day public comment period for closure proposal was started March 19, 2013 through April 20, 2013. June 26, 2013 - Closure documents issued by RCDEH. CASE CLOSED.

Site History:	***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** September 1997 Soil Gas Survey: eight soil vapor samples were collected at the Site at a depth of approximately 3 feet bgs. The highest vapor concentrations detected were 941 ppmv TPHg and 1,940 ppbv benzene. MTBE was analyzed using GC method at 218,000 ppbv and GS/MC method at 844,000 ppbv. June 1998 UST System Upgrade: the USTs and fuel distribution system was upgraded with the installation of spill containment sumps on the fuel USTs, fill and vapor vent ports, spill containment beneath the dispensers, and replacement of fuel system product lines. Soil samples were collected from beneath the dispensers and product lines. The highest concentration detected in soil was 5,200 ppm TPHg from DI-3 at 2 feet bgs. October 1998 Soil Boring: One angle-boring (B-1) was drilled to a linear depth of 60 feet at an angle of approximately 10 degrees. The highest concentrations detected in soil were 0.87 ppm MTBE at 35 feet bgs, and 0.030 ppm total xylenes at 40 feet bgs. No TPHg, benzene, toluene, or ethyl-benzene were detected in any sample analyzed from boring B-1 December 1999 Site Investigation: Groundwater monitoring wells MW-1, MW-2, and MW-3 were installed to depths of 60 feet bgs. MTBE was detected in soil from MW-3 at concentrations of 0.092 ppm at 20 feet bgs and 0.44 ppm at 30 feet bgs. No other concentrations were detected in any of the soil samples. The highest concentrations detected in groundwater were 1,500 ppb TPHg and 2,200 ppb MTBE from well MW-3. February 2001 Site Investigation: Monitoring wells MW-4, MW-5, and MW-6 were installed

TOSCO / 76 STATION #6962 (Continued) **S107863276**

to a depth of 60 feet bgs each. Maximum concentrations detected in soil were 3.2 ppm TPHg, and 5.2 ppm MTBE from MW-4 at 45 feet bgs, 55 ppm ethanol from MW-6 at 35 feet bgs, and 22 ppm methanol from MW-6 at 55 feet bgs. No BTEX were detected in any soil sample analyzed. TBA was detected at concentrations of 0.180 ppm and 0.039 ppm in MW-4 at 45 and 50 feet bgs, respectively. June 2004 Site Investigation: Off-Site groundwater monitoring wells MW-7 and MW-8 were installed to a depth of approximately 50 feet bgs each in the Walgreen s parking lot, located south of the Site across Alessandro Boulevard. No TPHg, BTEX, fuel oxygenates (including MTBE), or ethanol were detected in any of the soil samples. October 2004 Well Installation: Oxygen injection wells SP-4, SP-5, SP-6, and SP-8 and nested soil vapor extraction/oxygen injection wells VSP-1, VSP-2, VSP-3, and VSP-7 were installed to depths between 40 to 45 feet bgs. The maximum concentrations detected in soil samples analyzed were 13 ppm TPHg and 11 ppm MTBE from well VSP-3 at 35 feet bgs. March 2005 C-Sparge System Installation: A C-Sparge system was installed. C-Sparge system operation began on April 2, 2005 utilizing wells SP-4 through SP-6, SP-8, VSP-1 through VSP-3, and VSP-7. May 2006 Waste-Oil Site Assessment: Spill bucket replacement activities were conducted in association with the on-Site waste-oil UST. Two soil samples were collected. Total petroleum hydrocarbons as motor oil were detected at concentrations of 19,000 ppm in OW-1 at 3 feet bgs and 15,000 ppm in OW-2 at 4.5 feet bgs. TPHg was detected at 620 ppm in OW-1 at 3 feet bgs. No benzene, MTBE, or ethanol was detected in either sample. July 2006 Soil Confirmation Borings: Soil confirmation borings B-2, B-3, B-4, B-5, B-6, B-7, and B-8 were drilled to depths ranging between 46.0 to 47.5 feet bgs. Maximum concentrations detected in soil were 7.6 ppm TPHg from B-3 at 11 feet bgs, and 1.1 ppm MTBE from B-3 at 31 feet bgs. No other petroleum hydrocarbons were detected in any of the samples. January 2008 Soil Confirmation Borings: Soil confirmation borings B-9 and B-10 were drilled to a depth of 45 feet bgs each. Maximum concentrations detected in soil were 2.1 ppm MTBE, 0.0079 ppm TAME, and 0.085 ppm TBA. These concentrations were detected in boring B-10 at a depth of 30 feet. No additional hydrocarbon constituents were detected in the soil samples analyzed. December 2008 Closure Request: A Closure Request Report to CRDEH dated December 22, 2008, detailing site conditions and all assessment and remediation efforts, and recommending the case for closure. The CRDEH requested the re-installation of MW-3, MW-4 and MW-5 due to the rise in the groundwater table at the Site. Further, they requested the installation of an additional monitoring well and additional groundwater monitoring and sampling activities, and denied the Site closure. July 2009 Well Installation: Wells MW-3, MW-4, and MW-5, were destroyed and wells MW-3A, MW-4A, MW-5A, and MW-9 were installed to a depth of 41 feet bgs. The maximum concentrations detected in soil were 5.4 ppm TPHg from MW-5A at 11 feet bgs, 0.0017 J ppm benzene, and 0.048 ppm MTBE from MW-3A at 26 feet bgs and 36 feet bgs, respectively. REMEDIATION ACTIVITIES Operation of the ozone injection system began in April 2005 and was shut down in October 2009. The system operated for a total of 8,165 hours, injecting a total of approximately 73.5 pounds of ozone into the groundwater. The ozone injection system was shut down between May 2006 and April 2009 to complete confirmation soil borings, post-remedial groundwater monitoring, and request closure. The ozone injection system was restarted on April 28, 2009 for continuous operation to further remediate any residual hydrocarbons in groundwater. The system was

TOSCO / 76 STATION #6962 (Continued) **S107863276**

permanently shut down on October 27, 2009 GW Monitoring: GW monitoring has been conducted quarterly since 2000. GW flow has been predominantly to the south. The depth to gw has ranged from 35 to 25 ft below grade and is currently 25 to 27 ft below grade. GW was above the top of the well screens in wells MW-1 through MW-6 and wells MW-3, MW-4, and MW-5 were replaced with deeper-screened wells. Historically, the highest groundwater concentrations were detected in MW-3 and MW-4 near the UST cavity. Recent groundwater monitoring shows no TPHg or BTEX detections in any of the wells and 1.2 and 0.51 ppb MTBE detections in MW-4A and MW-9. Soil Confirmation: Jul 2006 Five confirmation soil borings were drilled to 46 ft below grade to verify the effectiveness of remediation associated with the gasoline release. Up to 7.6 ppm TPPH (B-3 at 36 ft) and 1.1 ppm MTBE (B-5 @ 31) were detected in the soil. No BTEX was detected. Jan 2008 Two additional confirmation soil borings were drilled to further assess area where elevated MTBE detected in confirmation boring B-5 (1.1 ppm). No TPHg or BTEX was detected. Up to 2.1 ppm MTBE (B-10 @ 30 ft) was detected. Closure request: February 2009 - Closure was denied by RCDEH based on elevated MTBE below the water table (2.1 ppm) and submerged well screens. Installation of a well southeast of the USTs and replacement of submerged wells MW-3, MW-4, and MW-5 was required. The highest soil sample below the water table near B-5 was required to be sampled for chromium. Further Soil & Groundwater Verification: July 2009 - Wells MW-3, MW-4, and MW-5, were destroyed by pressure grouting and wells MW-3A, MW-4A, MW-5A, and MW-9 were installed to a depth of 41 feet bgs. The wells were screened from 20-40 ft bgs. The maximum concentrations detected in soil were 5.4 ppm TPHg from MW-5A at 11 feet bgs, 0.0017 J ppm benzene, and 0.048 ppm MTBE from MW-3A at 26 feet bgs and 36 feet bgs, respectively. The new wells were sampled for 3 quarters. During the last quarterly monitoring event, all wells were non-detect for TPHg and BTEX and 1.2 and 0.51 ppb MTBE was detected in MW-4A and MW-9. Sept-Oct. 2009 All wells associated with this UST cleanup were properly destroyed. Dec 9, 2010 Case closed/ NFA required by Riv Co LOP.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

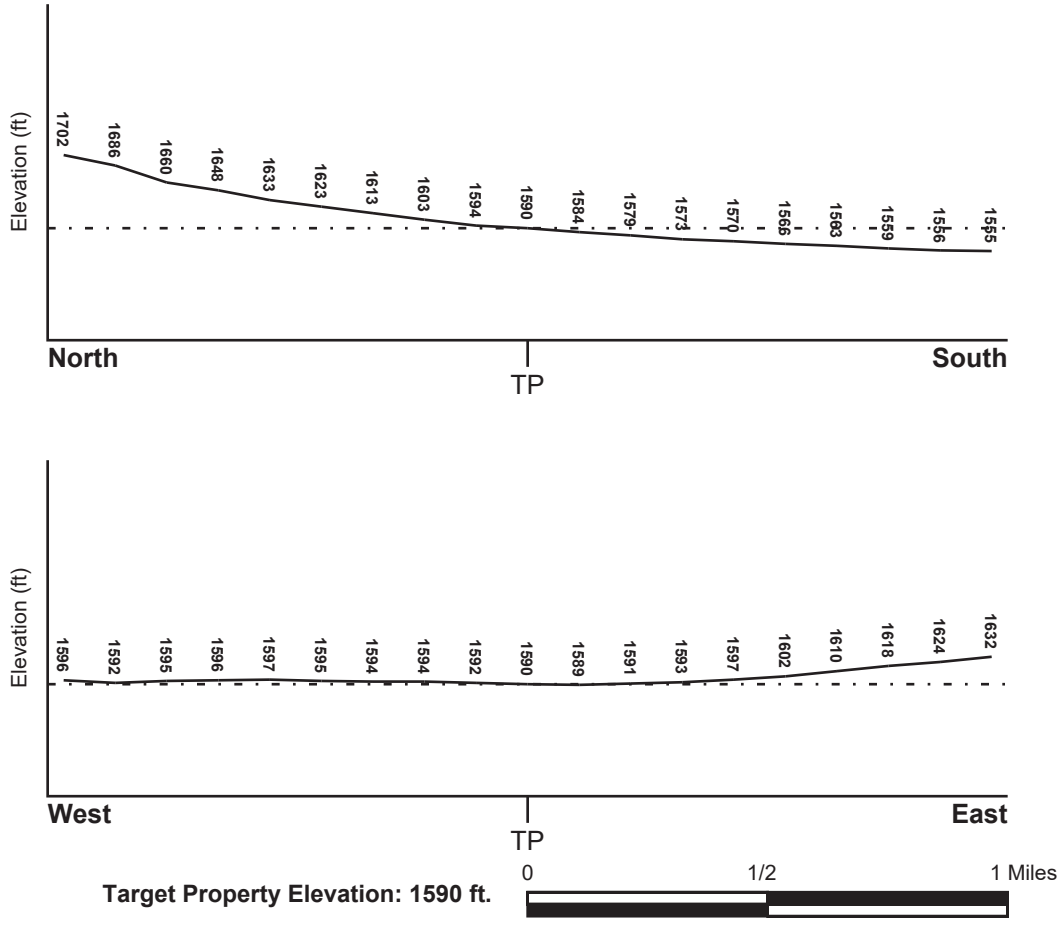

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
